Acreage, yield, production and value of principal crops, by counties and districts, 1925-44	
LIVESTOCK ESTIMATES.....	236
Principal species of livestock, number on farms, and farm value, January 1, 1926-45	

Foreword

All of the Illinois county estimates of crop production and livestock numbers, prepared during twenty years ending January 1, 1945, are assembled in this publication. A companion publication (Circular 445) covering all important series of State estimates was issued in 1949.

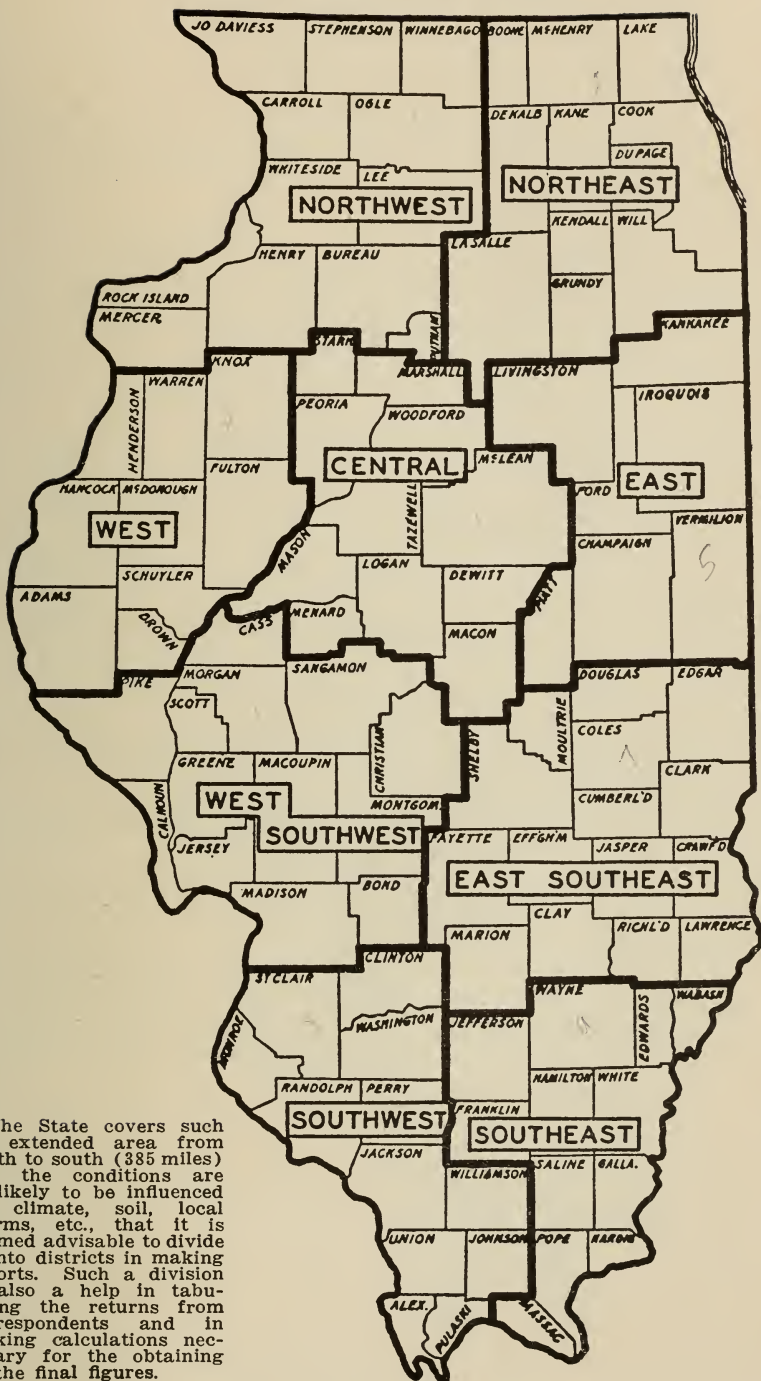

A majority of the various sets of estimates are reproduced here exactly as they originally appeared in current publications. In a few instances minor revisions were necessary to insure comparability throughout the period. For example, some of the original county estimates for the late twenties, failed to fully reflect trends subsequently made apparent by the Federal Census of 1930. Estimates of sheep numbers represent the only departure from traditional presentation. A completely new series, they represent "stock sheep" on farms rather than "all sheep" as in previous publications.

County estimates for the period since January 1, 1945, have been published in our annual statistical report. Following reappraisal in the light of the Federal Census of 1950 (not yet available) a five year supplement to this publication will be issued.

The efforts of untold numbers of Illinois people are represented in this publication. An accumulation of twenty years of records, it includes the contributions of many who have moved along to other fields and some departed from this world. The list of all who have helped would include many thousands—farmers reporting without compensation, rural mail carriers, tax assessors, and others—an accurate estimate of their numbers is impossible. The slow but constant changes occurring in the staff of the Crop Reporting Service make it *next* to impossible to give credit to all who have been responsible for processing of data and preparation of estimates. The complement of the office when copy for this publication was assembled for the printer included the following clerks and stenographers: Floyd Brandon, Joan Bunchman, Bert E. Dowling, Faye E. Harris, Eunice V. Hiler, Marie Hurrelbrink, Mary L. Langheim, Katherine S. Mulcahy, Bette J. Peifer, Mildred I. Roat, Estelle Steele, Leila Mae Terry, Marjorie Warrington, Marie Weber, and Inez M. Griffin, Head Clerk. Statisticians included Harold V. Edwards, Charles E. Erickson, J. H. Jacobson, Charles W. LeGrande, Francis E. Malone, and Burton R. Miller.

J. A. EWING,
Agricultural Statistician In Charge.

OUTLINE MAP OF ILLINOIS

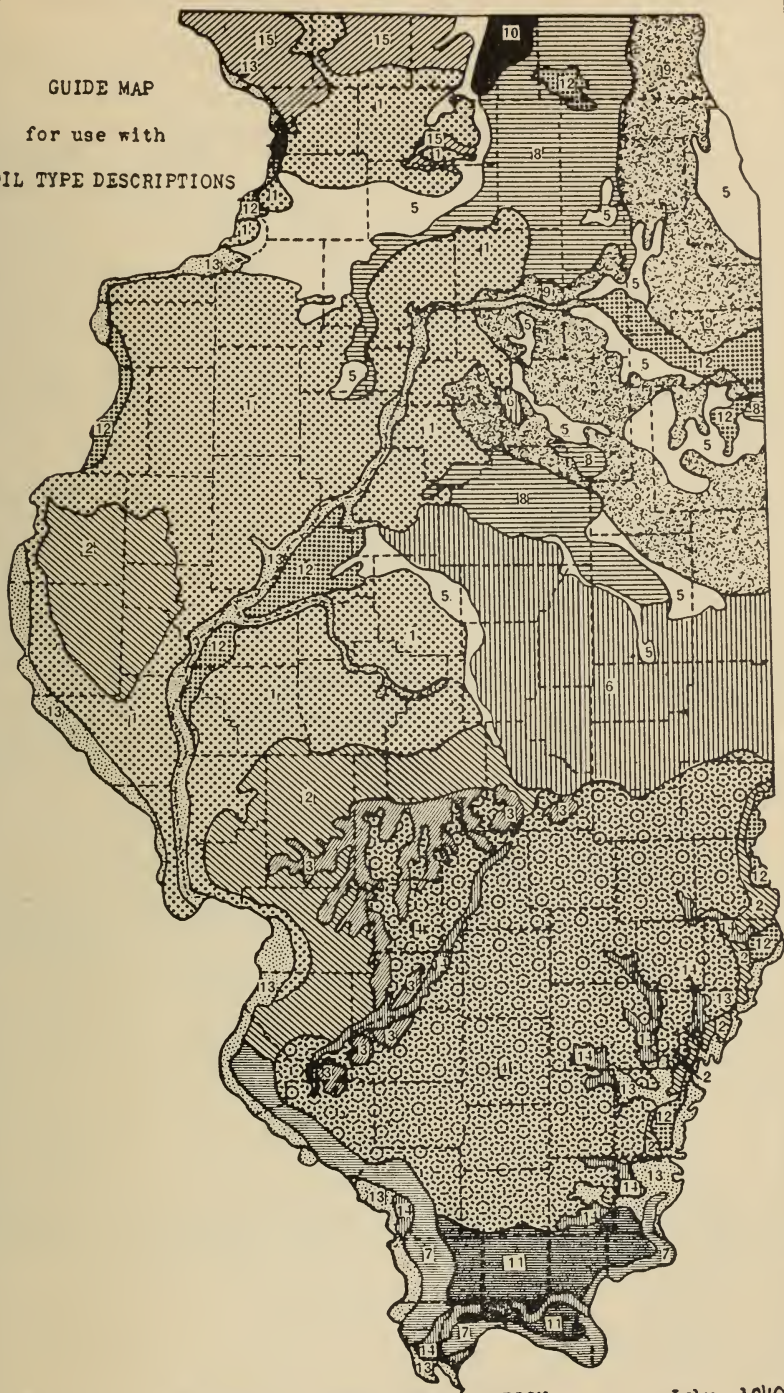

The State covers such an extended area from north to south (385 miles) and the conditions are so likely to be influenced by climate, soil, local storms, etc., that it is deemed advisable to divide it into districts in making reports. Such a division is also a help in tabulating the returns from correspondents and in making calculations necessary for the obtaining of the final figures.

SOIL TYPE DESCRIPTIONS

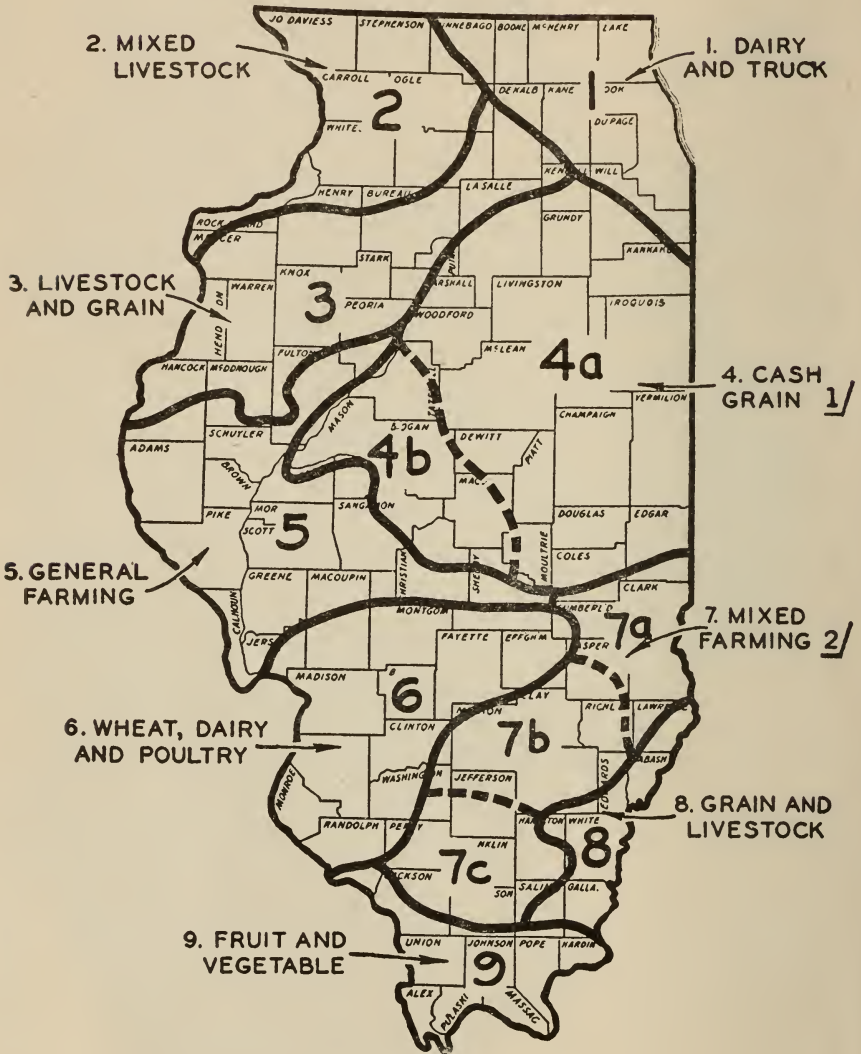

For use with "Guide Map" shown on opposite page

1. Dark-colored and light-colored upland soils derived from deep loess.
2. Grayish brown prairie and timber soils with imperfectly developed claypan subsoils.
3. Brownish gray strongly leached prairie soils mostly with claypan subsoils.
4. Gray and yellowish gray strongly leached prairie and timber soils mostly with claypan subsoils.
5. Dark- and light-colored moderately leached soils developed on glacial outwash and old lake bed sediments.
6. Dark- and light-colored moderately leached soils developed from thin loess on permeable Wisconsin till.
7. Yellowish gray timber soils developed from deep loess with subsoils of medium permeability.
8. Dark- and light colored soils, calcareous at 25 to 40 inches, developed from permeable Wisconsin till.
9. Dark- and light-colored moderately leached soils developed on slowly permeable Wisconsin till.
10. Dark- and light-colored moderately leached soils developed from very thin loess on moderately leached Illinoian till.
11. Soils of the Ozark uplift, largely undifferentiated.
12. Undifferentiated soils developed on glacial outwash plains and river terraces, frequently sandy and drouthy.
13. Undifferentiated dark-colored soils developed from stream sediments.
14. Undifferentiated light-colored soils developed from stream sediments.
15. Undifferentiated dark- and light-colored soils, rock outcrops frequent.

GUIDE MAP
for use with
SOIL TYPE DESCRIPTIONS

THE NINE MAJOR TYPE-OF-FARMING AREAS IN ILLINOIS

¹ (a) Corn and oats. (b) Corn and wheat.

² (a) General farming. (b) Redtop, fruit, and poultry. (c) General and part-time farming.
